

CROHN'S DISEASE OR ULCERATIVE COLITIS

doesn't have to determine
the memories you make.

If you have active Crohn's disease or ulcerative colitis,
our clinical research studies may be for you.

DIVERSITY&SELECTIONSTUDIES

Qualified participants may:

- Try an oral investigational drug to see if it reduces the signs and symptoms of Crohn's disease or UC
- Receive study drug and monitoring from a local study doctor at no cost
- Be eligible to participate in a long-term extension study
- Receive reimbursement for study-related travel expenses

CROHN'S DISEASE OR ULCERATIVE COLITIS

shouldn't be the reason for your butterflies.

If you have active Crohn's disease or ulcerative colitis,
our clinical research studies may be for you.

CONTACT US TO LEARN MORE:

We are evaluating an oral investigational drug called filgotinib to see if it reduces the signs and symptoms of Crohn's disease or UC by lowering the immune response that causes inflammation in the digestive system.
